

Game Pitch

Game title/name: SKRT (onomatopoeia of how a vehicle stops if braked violently)

Genre: Roguelike

Target audience: Teens-Adults

Game play and mechanics: A gameplay style similar to that of other previous 2d roguelike games (Vampire Survivors, 15 minutes till dawn), with the added mechanic of the player being the main source of damage through the use of collisions in a manner similar to how angry birds are shot through the slingshot, with a similar movement system.

Player goals: Destroy as many enemies as possible, get items, get as high of a score and survive a full 20 minutes (20 minute timer for main game, endless mode maybe as an option?).

Key/core features: When holding down the mouse button or space, the game should get the user's position relative to the cursor, and fling their player character when space/mouse button is let go.

Enemies should spawn off screen and move in a line towards the player (or in another manner where applicable, e.g. bosses may charge to where the player was or stand still and shoot projectiles they need to dodge)

Collisions should deal damage to enemies, who should drop exp on death.

When the player moves, their speed is converted to damage, with them being immune to damage the faster they move. (Health can be restored by damaging enemies at close range?)

Upon levelling up, the player should be able to pick from a selection of upgrades to deal damage in unique ways.

Pressing certain keys while moving will allow the player to perform tricks for extra style points, increasing user score (and maybe increase exp user gets or upgrade rarity?)

Upon death, score is converted to currency, allowing the player to buy permanent upgrades/powerups they can start with before starting a new round (e.g. greater pickup range, more damage).

The map should have a boundary instead of looping around. When the player hits it they should rebound off of it.

User interface design: A simple UI should follow the player's head, displaying their health and exp. Arrows may indicate where dangers offscreen are coming from.

Unique selling points: Roguelike games usually tend on having the player stay away from the enemy, and dealing damage from afar the game intends on putting a twist on this by forcing the player to get up close to get anything done.

I believe the slingshot style of movement will be able to add a fun way for them to get around, especially with the addition of performing style actions to add more flair
