- [Added Mines and finished minelayer](#)

The minelayer will place static entities (mines) that will blink red. It will pick a random spot on the map to place a mine, and will take 3 seconds to arm before placing it, turning red the closer it is to arming it. Minelayer's themselves will deal 0 damage, and can be knocked away to interrupt them, causing them to pick a new spot and not place a mine in the original spot. They'll also do a funny spin animation. When stood on, it will deal player damage (5), but will disappear on its own eventually.

- [Added new \(wip\) Enemy type: Minelayer](#)

This enemy is meant to wander the map and place mines that the player will need to avoid in order to not take damage. They will pick a random spot and when they reach it, sit there (laying mine) for 3 seconds before leaving. In this state they deal no damage and can be knocked away in order to interrupt them in which they'll pick a new spot.

- [Added Director and modified spawning array](#)

Changed the flat 100 sized array into a dynamic vector that can be pushed back and erased. The director has the ability to spawn enemies overtime and will spawn faster the longer the user plays. Can now work on adding new enemy types.

 [mbj3650](#)

Commits on Apr 21, 2026

- [Setup director class](#)

How it'll work: Director spends credits to spawn enemies (at this time only the base enemy), overtime, the director will get credits to spawn more enemies (they'll come from off screen)

Commits on Apr 16, 2026

- [Upgrade menu can now tell when a special upgrade requirement is met \(two upgrades merging into one\)](#)

Todo: Make it so the two original upgrades are removed, OR make it so the player can only access these upgrades if they skip picking an upgrade

 [mbj3650](#)

committed 2 weeks ago

- [Added upgrade menu](#)

When player needs to upgrade, a menu will popup (very work in progress) that lets the player pick 1 of 3 choices TODO: Add upgrade replacing later to make applicable upgrades move up a tier or be removed entirely

- [Added basic upgrades + Player changes](#)

Upgrades list will hold the id, name, tier, effect, icon path, description, what it upgrades into, a string that holds the stat and the percentage it affects (-1 if not applicable) as well as a sprite object At this time, the game pauses when the player gets a level up. The menu should appear during this (Might make upgrade menu a set of 3 sprite objects that can be clicked and will tell

the game what the user picked based on their cursor position) (This can be done by getting the middle of the screen and then placing a sprite there, then one to the left by a specific offset and to the right by the same offset) Updated setting up textures to load a 32px 8x8 box as a missing texture fallback Current upgrades are 3 speed upgrades, and 3 damage upgrades. PLANNED: A special upgrade will be shown to the player if they have the prerequisite upgrades Todo: Think about how to setup menu When a player is moving fast enough to damage, theyll lose a bit of momentum when hitting an enemy, but this becomes less apparent when you get upgrades that decrease the loss of speed upon rebounding, or getting more player speed (or both)

- [Upgrade list setup](#)

Upgrade list will set up all upgrades upon initialization. The plan is that the game will have access to the list, and will make a copy of it for itself that itll remove upgrades from as the player selects from it. When a player selects an upgrade, it will apply the effect to the player and attempt to remove its predecessor where applicable. E.g. If a player gets a 2nd tier speed upgrade, itll remove the 1st tier upgrade from the player's upgrade list before applying the effect When applying the effect, itll start with the base speed and then multiply it by every speed modifier upgrade to get the final value to set the speed to and then set it

- [Several Gameplay Additions](#)

Player now heals upon collision at fast enough speed Set up basic system for upgrades through vector containing template structs

 [mbj3650](#)

committed 2 weeks ago

- [Gameplay changes and adjustments](#)

Made player able to heal on impact, however it is lower than the damage output of enemies in Added a class to the player called currentupgrades that holds structs with a specific template in it that contains the Effect, cost, name, icon and description
